De Lasalle University Dasmariñas

Bachelor of science in Computer Engineering

2020 – 2024

Work Experience

Innovare HP | Aug 2025 – current

- Lead the company's overall technology vision and IT strategy, aligning systems, infrastructure, and digital initiatives with business goals.
- Oversee end-to-end system architecture, ensuring scalability, security, and reliability across all client and internal platforms.
- Direct DevOps strategy, including custom server architecture, deployment pipelines, and cloud infrastructure to support high-availability production environments.

Freelance – Project / Client based | Dec 2024 – Aug 2025

- Working as a Full Stack Developer, managing end-to-end development for various client projects.
- Handled custom server setups, DevOps tasks, and deployment pipelines to ensure smooth delivery and scalability.
- Developed and maintained RESTful APIs for seamless frontend-backend integration using Next.js and Golang.
- Configured and managed Cloudflare for performance optimization, DNS management, SSL setup, and security enhancements such as DDoS protection and caching.
- Implemented custom features based on client requirements, ensuring high performance and security.

Sta. Clara International Corporation | July 2024 – Dec 2024

- Worked as a Full Stack developer using Next.js and Supabase.
- Responsible working in creating new features, participate code review and optimizing the website.
- Collaborated closely with senior developers and cross-functional teams to implement best practices and deliver scalable solutions.
- Handled both frontend and backend tasks, including API integration, database structuring, and UI/UX improvements.
- Actively contributed to sprint planning, debugging sessions, and continuous improvement initiatives.

Studio20 Front-end Intern | Feb 2024 – May 2024

- Worked closely with team members in a front-end development role.
- Developed a responsive web application using Next.js and WordPress.
- My role includes maintaining code, fixing front-end bugs, creating new pages and UI utilizing CSS frameworks.

Projects

Noir-Clothing E Commerce | Next.js (App Router), Hono.js

- Built a full-stack e-commerce platform with a dedicated reseller dashboard, handling both frontend and backend development as a freelance developer.
- Developed a custom REST API using Hono.js for managing core backend functionalities like authentication, product management, and reseller tracking.
- Integrated Supabase as the primary database and auth provider, enabling real-time data handling and secure user sessions.
- Implemented Redis for efficient rate limiting and caching, improving API performance and scalability. Responsible for frontend and back-end development.
- Implemented PayMongo for secure and seamless payment processing, allowing customers to pay via cards, e-wallets, and other local methods.
- Managed the entire project lifecycle—from architecture and development to deployment and optimization.

Geinie | *NextJs (App Router), NestJs*

- Built an AI-powered single-tenant SaaS platform that allows users to summarize and analyze content using OpenAI's language models.
- Integrated Lemon Squeezy for seamless subscription billing, license validation, and user access management.
- Designed the platform with a focus on simplicity, maintainability, and secure user data isolation.

Formly | *NextJs (Pages Router)*

- A full-stack web application built as part of our capstone project, designed to manage and process digital forms efficiently.
- Utilized Next.js Pages Router for structured routing and server-side rendering, ensuring fast performance and maintainability.
- Handled both frontend and backend development, including REST API integration, custom feature and workflows.
- Implemented Supabase for authentication, database management, streamlining user and data handling.
- Worked on API integration, error handling, and full CRUD operations for seamless form workflows.

Pos Malaysia | *NextJs (Pages Router)*

- Full stack using NextJs pages router.
- A system for the employee of Pos Malaysia to track records and accomplishments.
- Work as a Front-end developer Intern, responsible for creating the UI/UX and develop it into code.

Technical Skills

Languages: Typescript, Golang

Frameworks: NextJs, NestJs, Express, NodeJs, ReactJs

Developer Tools: Git, Cursor, Figma, MySQL, MongoDB, PGsql Postman, Jira, Redis, Vercel, Docker, Kubernetes
